

ELECTRON BEAM SYSTEMS, LLC

101000, Russia, Moscow, Pokrovka str., building 14/2, office 2

Information letter.

Electronic Beam Systems LLC was established as a manufacturing and engineering company in 2016 and brought together specialists in the field of "beam technologies".

The company's employees are graduates of technical universities and have experience in the titanium market and the heat-resistant rolled products market since 1999.

Own design bureau and production potential of the company allows to produce the following equipment:

1. Gas discharge guns, sources and control systems for them;
2. Melting plants using electron beam (for melting titanium and the intermetallic compounds);
3. Welding installations and installations for melting ingots;
4. Installations for applying metal, metal-ceramic, ceramic multilayer and gradient coatings;
5. Installations for the production of spherical granules from nickel, titanium and intermetallic alloys by plasma spraying of a rotating electrode;
6. Sieving and magnetic separation of granules;
7. Installations of electrostatic separation of granules;
8. Installations for degassing and welding capsules;
9. Maintenance of installations with an electron beam.

The company has experience in supplying this equipment to both Russian and foreign enterprises. LLC "EBS" is ready to develop and supply any vacuum equipment according to individual technical specifications, provide personnel training services and supply production technology.

With faithfully,

Director @EBS@, LLC

P. Agranovskii
