INNOVATIVE ORGANIC AND
ORGANO-MINERAL FERTILIZERS

Strategy for Increasing Profitability
and Restoring Soil Fertility

2026

ABOUT THE COMPANY

The **BALTORGANIC** group of companies develops projects involving the production of proprietary, complex organic and organo-mineral fertilizers derived from animal- and plant-based raw materials.

Production facilities are located in the Leningrad Region and the Mari El Republic.

Product range

Organic fertilizers
in granules and pellets

Organo-mineral fertilizers

Liquid humic fertilizers

TWO **BALTOORGANIC** PRODUCT LINES

Two innovative lines to meet any agribusiness need.

100% Organic Fertilizers

Slow-release nutrition
Gradual release of nitrogen

Eco-friendly
100% natural product, no chemical additives

Base feeding
The ideal fertilizer for balanced, baseline soil care

Organo-Mineral Fertilizers (OMF)

Innovation
An organic capsule protects the mineral core

Safety
Does not burn roots, ensuring safe nutrient uptake

Flexibility
Custom formulas available (10-10-10, 9-3-3, and others)

100% ORGANIC FERTILIZERS

Natural power and absolute safety
in every granule.

Clean base

Made from deeply
processed chicken
manure

Eco-friendly

100% natural composition,
no chemical components added

Biological safety

Heat treatment guarantees
complete absence
of pathogenic microflora,
helminth eggs,
and weed seeds

Complex action

Contains stable organic
matter, enriched with humic
and fulvic acids to improve
soil health

BASE ORGANIC FERTILIZER: THE SMART **NPK 3.5-2.3-2.3** FORMULA

A balanced composition that feeds the plant gradually, doesn't leach out of the soil, and restores its fertility. **Ideal granule structure.** No need to buy new equipment — applied with standard fertilizer spreaders and seed drills.

N (Nitrogen) — 3.5%
Smooth, stress-free growth

Provides a slow-release effect: nitrogen isn't washed by rain into deeper soil layers but reaches the roots gradually throughout the season

P (Phosphorus) — 2.3%
Powerful root system

Gives a strong start to vegetative growth and activates the formation of a dense, deep root network so the plant can draw its own moisture

K (Potassium) — 2.3%
Strong immunity

Increases the crop's resistance to drought, temperature swings, and disease

HOW IT WORKS: SMOOTH NUTRITION **WITHOUT STRESS**

A balanced composition feeds the plant gradually, doesn't leach out of the soil, and restores its fertility.

Extended-release action

Nutrients are released gradually and evenly throughout the entire growing season

Maximum uptake

The plant takes exactly what it needs — this eliminates the risk of nutrients leaching into groundwater during heavy rainfall

PRACTICAL APPLICATION AND DOSAGE FOR ORGANIC FERTILIZER

BALTORGANIC organic fertilizer is the ideal base solution for maintaining fertility and balanced farming.

Dosage

Recommended application rate is 0.5–1.5 t/ha, depending on the crop grown

Ease of use

The granule shape is ideal for use with standard mineral fertilizer spreaders

OMF: ORGANO-MINERAL FERTILIZERS

Organo-mineral fertilizers (OMF) are a smart combination of our 100% organic base and targeted mineral nutrition.

Enhanced composition

Concentrated macronutrients (nitrogen, phosphorus, potassium) are enriched with magnesium, sulfur, a complex of trace elements, organic acids, and beneficial bacteria in spore form

Nutrient retention

OMF's key technological difference: nutrients don't interact directly with the soil and go to waste. A powerful charge of nitrogen, phosphorus, and potassium is securely held inside the granule for an extended period, preventing loss through leaching

ARCHITECTURE OF THE SMART CAPSULE

The granule's unique architecture keeps nutritional energy stored inside and releases it exactly when the plant needs it.

Organic shell

Made from processed chicken manure. Isolates the minerals from direct contact with the soil, preventing them from interacting with the soil environment

Mineral core

Nitrogen, phosphorus, and potassium (NPK) are securely locked inside. The complex is enhanced with magnesium, sulfur, trace elements, and beneficial bacteria in spore form

Nutrients are reliably protected from rapid leaching by rainfall and convert to an available form gradually, providing an extended feeding effect.

PROTECTING THE ROOT SYSTEM

Gentle nutrition
without chemical stress.

Safety during application

The organic granule is extremely gentle in the soil environment. Unlike conventional chemistry, OMF doesn't burn the plant's root system even if the dosage is exceeded

Natural uptake

The plant experiences no stress from close contact with the fertilizer. The root system wraps around the granule itself and draws out the nutrients the crop needs

R&D: BUILDING THE IDEAL FERTILIZER

Custom development of an organo-mineral matrix tailored to your agronomic needs

Recipe development takes into account:

Soil audit — an in-depth analysis of your farm's baseline data to precisely balance the macro- and micronutrients needed

Technology selection

Adapting the recipe and granule properties to any stage: enriching the soil before sowing, primary tillage, or targeted feeding during the growing season.

Custom formula

Ability to produce any variation of fertilizer.

Example

programmable formulas from our base line:

NPK 10-10-10 + 3% humic acids
universal

NPK 9-3-3
cereals, rice, corn

NPK 4-3-10
vegetable crops

NPK 8-6-7
legumes

INVESTING IN SOIL HEALTH

Restoring fertility

Regeneration

Improves the humus content
of depleted and degraded land

Replenishes stores of organic matter
and nutrients in the soil

Water-holding capacity

Increases biological activity

Improves the soil's water-holding
capacity by 20–30%

Detoxification

Binds residual heavy metals, pesticides,
and other toxins in the soil

Prevents them from entering
plants and groundwater

PROVEN EFFECTIVENESS:

Official 2025 Results

FGBU "Gossortkomissiya" research:

(Russian State Commission for Variety Testing)

Assessment of agronomic effectiveness on sod-carbonate soils in the Leningrad Region

Comparison methodology

Direct comparison of BALTOrganic OMF against the standard technology for applying chemical mineral fertilizers

Testing base

Trials were conducted on winter and spring crops, as well as on potatoes (Nevsky variety), over the 2024–2025 season

Result status

A significant yield increase was recorded across every crop tested, without exception, compared to the control groups

PROVEN EFFECTIVENESS

Field trials 2024–2025
Russian State Commission for Variety
Testing (Gossortkomissiya)

Field trials using BALTORGANIC organic fertilizer showed a sustained increase in crop yields and improved economic efficiency of production.

IMPROVED PRODUCT QUALITY

Field trials of **BALTORGANIC** organic fertilizer showed not only higher yields but also improved quality characteristics of the harvested crop.

The trials showed improvements in crop structure and quality indicators

Recorded indicators:

- Increased **1,000-seed weight**
- Higher **grain test weight** (volume weight)
- More lateral shoots (tillers) in **cereal crops**
- More **tubers per potato plant**
- Higher yield of **marketable tubers**

Using the fertilizer promotes
a more uniform, market-ready harvest.

PACKAGING

Products are supplied in various formats depending on the client's needs and purchase volume.

Bulk

For large farms and industrial use

Big bags 500–1,000 kg

A convenient solution for storage, transport, and mechanized unloading

25 and 50 kg bags

Format for small farms, greenhouse operations, and retail supply

Private label (white-label)

Option to package the product under the client's own brand

BALTORGANIC LOGISTICS

Products are supplied in various formats depending on the client's needs and purchase volume.

Shipping is carried out via several methods

Road transport

Prompt delivery across Russia and the CIS countries

Rail transport

Efficient delivery of large batches over long distances

Sea container shipping

The optimal solution for international deliveries and export contracts

An established logistics system ensures stable product supply and on-time shipping.

FOREIGN TRADE AND EXPORT

We support export shipments and provide a full cycle of foreign trade operations.

Shipments go through sea terminals at the Port of St. Petersburg and the Ust-Luga sea port, allowing international deliveries to be organized efficiently.

ULTRAMAR

We provide:

-  Support for export contracts
-  Preparation of the necessary foreign-trade documentation
-  Organization of sea logistics
-  Coordination of international deliveries

This allows clients to receive the product in various countries and regions.
